Implementation

- Why a Discovery tool?
- Why Ebsco?
- What happened?
 - Dedicated project manager (Amanda Ferrante) – already familiar with other NHS set ups

“The questionnaire”

- Started well – name of catalogue, number of records
- Then metadata, persistent unique identifier for each record, library look up table, URL links, permalink & URL syntax, real time availability checking
- Also details of partner databases

Support from Ebsco

- Regular Webexes - with homework inbetween!
- Lots of emails
- Quick answers to queries
- Amanda kept us on track
- Sign off

Things to think about

- LCH catalogue or pan Leeds?
- Real time access or manual uploads?
- Electronic books – we have DDA access, so separate uploads required
- Implication of “ticking all the free stuff”
- We cover various organisations but this just purchased for LCH
